HEARTMATE 3™ LVAD PATIENT GUIDE

EXCELLENCE IN EVERY MOMENT
QUICK START GUIDE

This patient guide is for using the HeartMate 3™ Left Ventricular Assist Device (LVAD) that both the patient and caregiver will need to be familiar with upon hospital discharge. Although most of the procedures can be performed by the patient, a caregiver’s assistance will be needed in some cases. For more detailed information about monitoring and maintaining the equipment, consult the complete HeartMate 3™ Left Ventricular Assist System Patient Handbook.

WARNINGS AND CAUTIONS

Review all the warnings and cautions in the HeartMate 3™ Left Ventricular Assist System Patient Handbook.

WARNINGS refer to actions or hazardous conditions that could cause serious injury or death.

CAUTIONS refer to actions or potentially unsafe conditions that are usually not life-threatening risks but may cause injury, damage the equipment or affect how the system works.

THE HEARTMATE 3™ LVAD SYSTEM

1. HEART PUMP
   Connects to the left side of your heart and moves blood from your heart to the rest of your body.

2. DRIVELINE: PAGE 23
   Transfers power and information between the controller and the heart pump.

3. SYSTEM CONTROLLER: PAGE 9
   Powers and checks the pump and driveline. The controller uses alerts to tell you how the system is working and includes 15 minutes of emergency backup power.

4. BATTERIES AND BATTERY CLIPS: PAGE 29
   Powers the system when you are active or outdoors. You always need to use two batteries at a time.

5. BATTERY CHARGER: PAGE 30
   Charges up to four 14 V lithium-ion batteries at a time and measures battery charge status.

6. MOBILE POWER UNIT (MPU): PAGE 32
   Provides power to the System Controller and pump. Echoes System Controller alarms.
WHAT SHOULD I KNOW PRIOR TO HOSPITAL DISCHARGE?

- How to switch the power sources, from MPU to battery to MPU
- How to change the batteries
- How to recharge the batteries
- How to calibrate the batteries
- How to care for the driveline exit site
- How to change the internal MPU battery
- How to change to the backup System Controller (in case of an emergency)

IMPORTANT

Be sure to keep a backup System Controller and charged batteries with you at all times for use in case of an emergency.

INSTRUCT™ PATIENT EDUCATION PATHWAY

Scan the QR code or text LIFE to 1-844-HEART-34 (1-844-432-7834) to begin receiving educational messages.
NOTES
OVERVIEW

The System Controller is a small computer that controls and checks system information. It is connected to the pump via the driveline. It is used to control and respond to system operation. It identifies and warns of any problems in the system operation.

The System Controller consists of control buttons, lighted symbols and a user interface screen.

1  POWER SOURCE CONNECTIONS
2  DRIVELINE CONNECTION
3  CONTROL BUTTONS
   a. Battery button
   b. Display button
   c. Silence alarm button
4  LIGHTED SYMBOLS
   a. Cable disconnect symbols
   b. Status symbols
   c. Pump running symbol
5  USER INTERFACE SCREEN
BUTTONS AND USER INTERFACE SCREEN

1 **BATTERY BUTTON**
   - Displays the battery power (press and release).
   - Tests the controller (press and hold for 5 seconds).
   - Puts the controller into sleep mode (press and hold for 5 seconds when nothing is connected to the controller).

2 **DISPLAY BUTTON**
   Activates the user interface screen (press and release) to display information about system operation.

3 **SILENCE ALARM BUTTON**
   - Silences an active alarm (press and release).
   - Displays previous alarms (press and release the silence alarm and display buttons simultaneously).

4 **USER INTERFACE SCREEN**
   Displays information including pump speed, pump flow, pulsatility index, power and charge status of the backup battery.
**USER INTERFACE SCREEN DISPLAY**

<table>
<thead>
<tr>
<th>DISPLAY BUTTON ACTIONS</th>
<th>SCREEN DISPLAYED (EXAMPLE)</th>
<th>MEANING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Press ONCE</td>
<td><img src="image" alt="Pump Speed" /></td>
<td>Pump speed in revolutions per minute</td>

<td><img src="image" alt="Power" /></td>
<td>Power in watts</td>
</tr>
</tbody>
</table>
| Press FIFTH time       | ![Backup Battery](image)   | The System Controller’s backup battery (located inside the System Controller and used to temporarily run the pump during an emergency) has multiple charge status states:  
1. Charged (ready for use)  
2. Charging (actively charging) |
| Press SIXTH time       | ![Blank Screen](image)     | Blank user interface screen indicates the screen is off, which is normal |
LIGHTED SYMBOLS

The System Controller provides information about the system’s functioning using lighted symbols on the device. The symbols indicate when the pump is running or when there’s a problem with the pump’s functioning that needs immediate attention. Other symbols indicate remaining battery power, problems with the connections to the power cable or driveline, or other issues with the system.

**YELLOW LIGHT**

Near the white or black power cables comes on when a power cable is not well connected with or is disconnected from the System Controller.

**RED LIGHT**

Near the driveline connector comes on when the driveline is not well connected with or is disconnected from the System Controller.
LIGHTED SYMBOLS

PUMP RUNNING LIGHT
Stays lit green as long as the LVAD is running.

BATTERY CAPACITY LIGHT
4 green lights = Approximately 75%–100% of power remains
3 green lights = Approximately 50%–75% of power remains
2 green lights = Approximately 25%–50% of power remains
1 green light = Less than 25% of power remains
Yellow diamond only = Less than 15 minutes of power remains

LOW BATTERY ALERT
Less than 5 minutes of battery power remain. Immediately replace used batteries with fully charged batteries or switch to the MPU.

HAZARD ALARM
When the red heart symbol comes on, follow the on-screen instructions. Do this immediately.

YELLOW WRENCH
Lights up yellow when the System Controller detects a mechanical, electrical or software issue with the system.
# ALARMS

System Controller advisory and hazard alarms are messages that appear on the user interface screen when a problem with the system needs immediate attention. Some of the alarms indicate problems you can address yourself (for example, a disconnected power cable that you should reconnect). But most instruct you to call your hospital contact for instructions.

CHANGES TO BACKUP SYSTEM CONTROLLER — MULTIPLE SOURCES

Replace the running System Controller with the backup controller and multiple available power sources.

1 SET UP

This procedure will require assistance from a caregiver.

1. Place the backup System Controller within reach.

2. Ensure the patient is sitting or lying down, as he or she may get dizzy if the pump stops briefly.

3. Unlock the driveline safety tab for both controllers (see the image below).

CAUTION

Do NOT attempt to change your System Controller without having a trained, competent caregiver at your side to assist. Follow all alarm instructions, including calling the hospital. Always contact your LVAD center before changing System Controllers.
CHANGES TO BACKUP SYSTEM CONTROLLER — MULTIPLE SOURCES

Replace the running System Controller with the backup controller and *multiple available* power sources.

2 REPLACE SYSTEM CONTROLLER

**Important:** Keep the running System Controller connected to power.

1. Connect the white and black connectors on the backup System Controller to power.

2. Promptly move the driveline from the running controller to the backup controller (see steps A–C at right).

3. Make sure that the green pump running symbol on the backup System Controller is illuminated.

   | A. Align the driveline arrow/alignment mark with the arrow on the controller. |
   | B. Push the red button and firmly insert the driveline until it snaps into place. |
   | C. Slide the safety tab over the red button. |

**Important:** If the safety tab does not slide fully over the red button, the driveline is not connected. Disconnect the driveline and reconnect it.

3 FINISH

1. Put the old, replaced System Controller into sleep mode by disconnecting from the power, and then pressing and holding the battery button for 5 seconds.

2. Do not use the old System Controller ever again. To request a new backup System Controller and for instructions on returning the old one, contact the hospital.
Changes to Backup System Controller – Single Source

Replace the running System Controller with the backup controller and a single available power source (exchange while on MPU or batteries only).

1. **SET UP**
   
   This procedure will require assistance from a caregiver.

   1. Place the backup System Controller within reach.
   
   2. Ensure the patient is sitting or lying down, as he or she may get dizzy if the pump stops briefly.
   
   3. Unlock the driveline safety tab for both controllers (see the image below).

---

**CAUTION**

Do NOT attempt to change your System Controller without having a trained, competent caregiver at your side to assist. Follow all alarm instructions, including calling the hospital. Always contact your LVAD center before changing System Controllers.
Changes to Backup System Controller — Single Source

Replace the running System Controller with the backup controller and a single available power source.

2 Replace System Controller

1. Move the white connector’s power source from the running controller to the backup System Controller.

2. Promptly move the driveline from the running controller to the backup controller (see steps A–C at right).

3. Make sure that the green pump running symbol on the backup System Controller is illuminated.

4. Move the black connector’s power source from the running System Controller to the backup controller.

   A. Align the driveline arrow/alignment mark with the arrow on the controller.

   B. Push the red button and firmly insert the driveline until it snaps into place.

   C. Slide the safety tab over the red button.

Important: If the safety tab does not slide fully over the red button, the driveline is not connected. Disconnect the driveline and reconnect it.

3 Finish

1. Put the old, replaced System Controller into sleep mode by disconnecting from the power, and then pressing and holding the battery button for 5 seconds.

2. Do not use the old System Controller ever again. To request a new backup System Controller and for instructions on returning the old one, contact the hospital.
PERFORM A CONTROLLER SELF TEST

Perform a System Controller self test every day to check the audible and visual alarm indicators on the user interface. The System Controller self test is a loud, bright function. All the audible and visual indicators should come on and “Self Test” should appear on the screen.

To perform a System Controller self test:

1. Press and hold the battery button  for 5 seconds.
2. Check that:
   - “Self Test” appears on the screen.
   - All symbols and indicators on the user interface illuminate at the same time.
   - System Controller is making a loud, steady, audible alarm tone.
3. Release the battery button . All the audible indicators/lights should remain on for 15 seconds, after which the audible indicators/lights stop, the screen goes black and the self test is complete.

IMPORTANT

If an alarm occurs during a self test, the self test terminates and the alarm’s on-screen indicator remains active. A System Controller self test cannot be initiated during the following alarms: any hazard alarm, power cable disconnected advisory alarm or low battery power advisory alarm.
DRIVELINE EXIT SITE CARE AND STABILIZATION

It is very important to keep the driveline exit site (where the driveline goes through the skin) clean and dry at all times. Keeping the exit site clean and dry lowers your risk for infection. After leaving the hospital, you are responsible for caring for the exit site. Be sure to always follow the steps provided by your nurse or hospital contact. A driveline management system, supplied by the implanting center, should be used at all times. The driveline management system should consist of a dressing and stabilizer.

**IF YOU NOTICE ANY SIGNS OF INFECTION**, call your hospital contact right away. **Do not wait!** Early treatment makes a difference.
An 11 V lithium-ion backup battery inside the System Controller provides at least 15 minutes of backup power to the LVAD if the in-use power source is disconnected or fails.

The System Controller’s backup battery will be charged once external power is connected to the System Controller (batteries or MPU).

**WARNING**

The 11 V lithium-ion backup battery should be used only for temporary support during a power-loss emergency. Inappropriate use of this backup battery may result in diminished run time during a power-loss emergency.
CHARGING THE BACKUP BATTERY

Charge the backup battery inside the backup System Controller.

1. Connect the backup System Controller to a power source (MPU or two HeartMate 3™ LVAD 14 V lithium-ion batteries).

2. When the System Controller is connected to power, the user interface screen displays “Charging” or “Charging Complete.”

3. When charging is complete, perform a self test on the backup System Controller (press and hold the battery button for 5 seconds).

4. Disconnect power from the backup System Controller. Place the backup System Controller back in the protective case. No further action is needed for 6 months.

CAUTION
The 11 V lithium-ion backup battery inside the backup System Controller must be charged once every 6 months.

IMPORTANT
Do not remove power until “Charging Complete” is displayed. It can take up to 3 hours to charge the System Controller’s backup battery.
YOU CAN REDUCE STATIC ELECTRICITY WITH PRODUCTS SUCH AS:

• A humidifier to add moisture to the air.
• Dryer sheets and fabric softeners for clothes and bedsheets.
• Antistatic spray on carpets and other materials.
• Moisturizers for your skin.
• Cotton fabric clothing and bedsheets.

YOU CAN RECEIVE A STATIC SHOCK WHEN DOING SUCH THINGS AS:

• Folding or changing bedsheets.
• Taking laundry out of the dryer.
• Dragging your feet on carpet.
• Touching the screens of older TVs or computers (LCD and LED screens are okay).

Fabrics like wool, silk and synthetic materials can build up static electricity. Use cotton fabric when possible.

Static electricity is more common when the air is dry (humidity less than 20%). Cold weather and home heating systems can make air drier. A humidifier can make air less dry and reduce static electricity.

WHAT YOU SHOULD DO TO REDUCE STATIC ELECTRICITY

When you are not sleeping or resting, it is recommended to use battery power instead of the MPU to power your HeartMate 3™ LVAS. Battery power can help reduce damage or harm to your system from static electricity.

WHAT YOU SHOULD KNOW ABOUT STATIC ELECTRICITY

Static electricity occurs when two objects come into contact. High levels of static electricity may damage or harm the HeartMate 3™ LVAS and may cause your pump to stop.

SYSTEM CONTROLLER
ALARMS YOU WOULD SEE AND HEAR

When you are using the MPU, static electricity can damage it. If this happens, the MPU is not able to supply electric power to the System Controller. Both the MPU and the System Controller will alarm to let you know.

THE MPU GREEN POWER LIGHT WILL BE OFF. YOU WILL HEAR A LOUD, CONSTANT ALARM TONE.

SCENARIO 1

The System Controller will display the No External Power Alarm. You will see flashing yellow lights next to the power cables, a flashing red battery and the pump running symbol is green. You will hear a loud, constant alarm tone. The display screen will show two messages: Connect Power Immediately (Fig. 1) and Backup Battery (Fig. 2).

SCENARIO 2

The System Controller will display the No External Power Alarm. You will see flashing yellow lights next to the power cables, a flashing red battery, a flashing red heart and the pump running symbol will be off (black). You will hear a loud, constant alarm tone. The display screen will show two messages: Connect Power Immediately (Fig. 3) and Backup Battery (Fig. 4).

WHAT YOU SHOULD DO

Connect to battery power right away. If the alarm does not stop, call your VAD Coordinator or hospital contact immediately.
POWERING THE SYSTEM
14 V LITHIUM-ION BATTERIES

The HeartMate 3™ LVAD uses 14 V lithium-ion batteries that provide up to 17 hours of support. They require 4 hours to charge. Five lights on each battery indicate the amount of power remaining in the battery.

<table>
<thead>
<tr>
<th>NUMBER OF LIGHTS ILLUMINATED</th>

**CHANGING THE ALKALINE AA BATTERIES**

1. Loosen the screw from the rear panel.

2. Open the battery compartment and pull the red ribbon to remove the batteries.

3. Place the alkaline AA batteries in the compartment.

4. Close the compartment and tighten the screw.
ACCESSORIES
**Shower Bag**
Keeps the controller and the batteries dry when you shower.

**Consolidated Bag**
Holds both the controller and the batteries in one bag.

**Battery Holster**
Allows the batteries to be carried in shoulder straps.

**Belt Attachment**
An alternative way of wearing the controller.

**Holster Vest**
A mesh vest that carries the batteries and spreads their weight across the torso.
EMBRACE EXCELLENCE EVERY DAY

By choosing the HeartMate 3™ LVAD, you can hold on to what matters most.

EMPOWERING THE TRANSFORMATION OF HEART FAILURE

From treatment to ongoing patient management, Abbott is committed to working with you to transform heart failure and improve more patient lives.

These materials are not intended to replace your doctor’s advice or information. For any questions or concerns you may have regarding the medical procedures, devices and/or your personal health, please discuss these with your physician.

Abbott.com/HeartMate
Rx Only

Brief Summary: Prior to using these devices, please review the Instructions for Use for a complete listing of indications, contraindications, warnings, precautions, potential adverse events and directions for use.

HeartMate 3™ LVAS Indications: The HeartMate 3™ Left Ventricular Assist System is indicated for providing short- and long-term mechanical circulatory support (e.g., as bridge to transplant or myocardial recovery, or destination therapy) in adult and pediatric patients with advanced refractory left ventricular heart failure and with an appropriate body surface area.

HeartMate 3™ LVAS Contraindications: The HeartMate 3™ Left Ventricular Assist System is contraindicated for patients who cannot tolerate, or who are allergic to, anticoagulation therapy.

HeartMate 3™ LVAS Adverse Events: Adverse events that may be associated with the use of the HeartMate 3™ Left Ventricular Assist System are: death, bleeding, cardiac arrhythmia, localized infection, right heart failure, respiratory failure, device malfunctions, driveline infection, renal dysfunction, sepsis, stroke, other neurological event (not stroke-related), hepatic dysfunction, psychiatric episode, venous thromboembolism, hypertension, arterial non-central nervous system (CNS) thromboembolism, pericardial fluid collection, pump pocket or pseudo pocket infection, myocardial infarction, wound dehiscence, hemolysis (not associated with suspected device thrombosis) or pump thrombosis.
